

# Average TIC Across Solvent Systems - solventmatrix

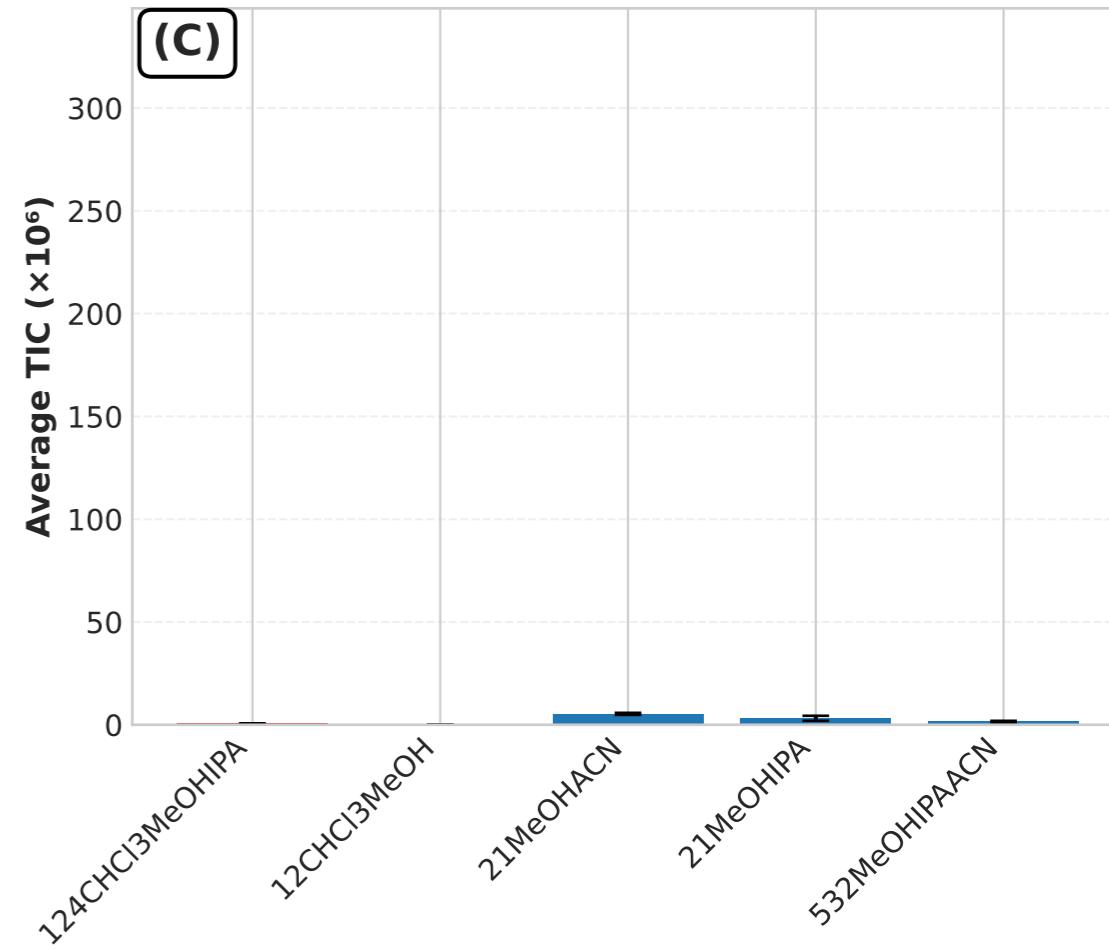

**Cer**

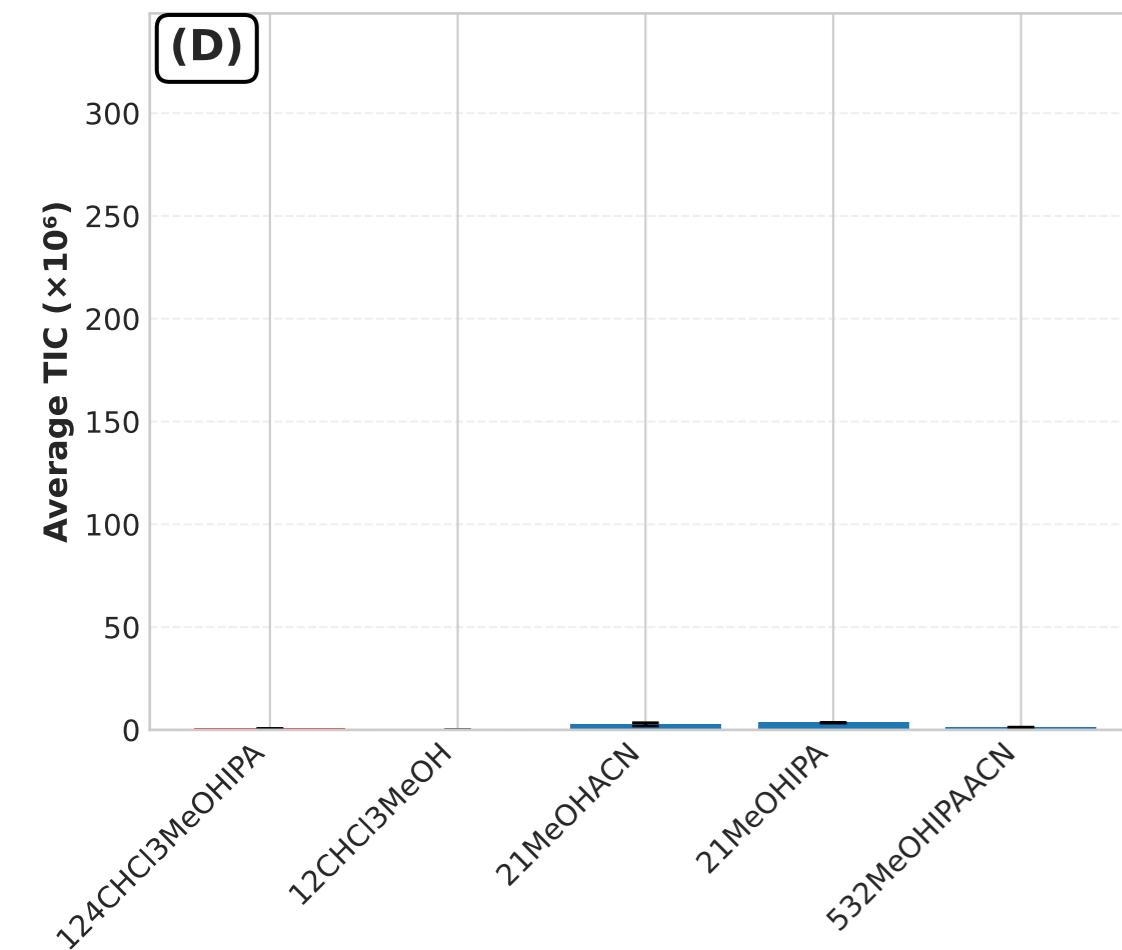

**PC**

**PE**

**PS**

**TG**

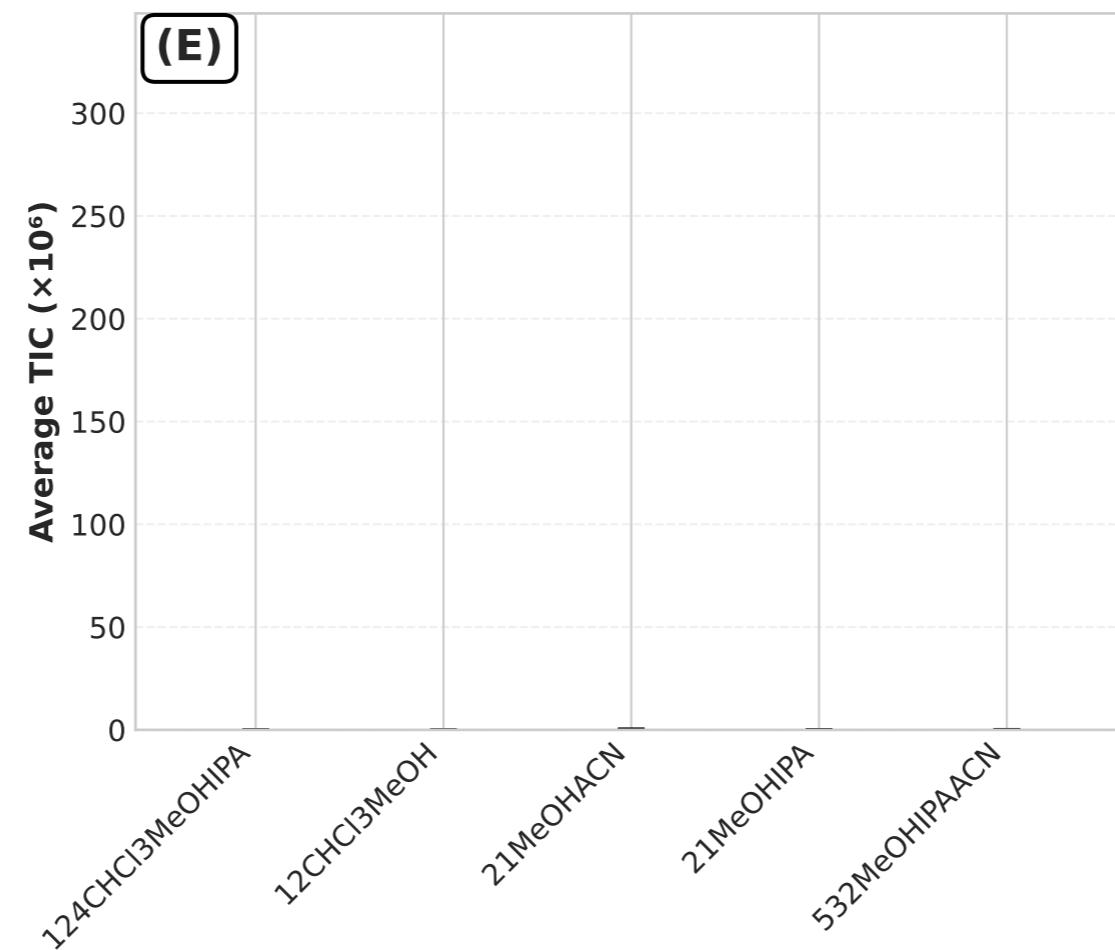

Figure: Multi-panel comparison of average TIC intensities across different solvent systems. Each panel (A-E) represents a different lipid class. Blue bars indicate Human solvent systems (21Me/532Me), red bars indicate RAG solvent systems (124CH/12CH). Error bars represent standard deviation. All panels share the same y-axis scale for direct comparison. n=5 lipid classes.
